SPDI Announces New Corporate Headquarters

Double in Size, SPDI Becomes An Off-Site Warehouse for Customers.

Delray Beach, FL, January 25, 2006: SPDI, the UV product experts, announces the Florida based company has moved from Deerfield Beach to a new base of operation in Delray Beach, Palm Beach county, Florida. The new location includes an expansive warehouse and a premiere development lab – one of the best in the industry.

“With double the warehouse space, we now have the capability to be an off-site warehouse for our customers. Customers tell us their specific lamps and replacement part needs and we maintain inventory to ship as needed. Same day shipping is even available! For new customers, they just need to tell us their specific lamp needs and we will do the same - keep their stock on-hand and ship as requested.” says President and co-founder John Wilson. Wilson also adds “In our new space we built an on-site development lab that lets our developers and tech support team get hands-on which is ideal for product development as well as troubleshooting for our clients.”

SPDI custom built a state-of-the-art communication system for the company’s sales and technical support teams so they can guarantee clients a same day call back. SPDI’s co-founder and Vice President Bob Schenk adds, “This is an excellent advantage for our clients as many OEM’s and suppliers are based overseas and often take 48 hours or more to return calls.”

SPDI’s new address and phone: 2855 South Congress Avenue, Suite C, Delray Beach, FL 33445
Corp. Offices 561- 243-8442 | Sales & Support 1-800-977-7292

SPDI is a developer of revolutionary High Intensity UV curing systems (currently the Highest Output UV available on the market) and pre-treating products designed to increase productivity and profitability for printers worldwide. All products and systems are based on basic printing principles rather than specific machinery – making it simple and easy to integrate seamlessly with clients’ existing printing or coating equipment. SPDI is the first in the industry to provide 100% turnkey service; handling both installation and integration. While SPDI offers a wide selection of replacement UV lamps and replacement components, the true value of SPDI’s product line is the innovative Lamp/Reflector kit, Solution Series Total-Cure UV Drying System and Total-Treat Pretreatment System which are built on SPDI’s proprietary technology which enable customers to immediately increase productivity and profitability....to get the edge on their competition. SPDI: American Made Products. Worldwide Support.
